

Snow-Blade SB-295

The snow is accurately being removed with the Snow-Blade SB-295.

Snow-Blade SB-295	Technical specifications
Working with	2.95m (112")
Weight	260 kg (573 lbs)
Tractor required	40hp min. with front 3-point linkage
*for hydr angled blade	*double acting hydr valves
Optional	extra wide tires, 185mm, for natural turf

The Snow-Blade SB-295 is the ideal snow remover for sports fields made of both synthetic and natural turf, fitting relatively small tractors.

The Snow-Blade "rolls" the snow off the pitch due to its original design of a curved, leaning backwards, blade. This ensures that the rolling snow is kept hostage within the area of the blade.

The plastic scraper at the bottom separates the snow from the grass, so brushing the pitch afterwards is not needed.

Two in height adjustable wheels carry the weight of the blade, limiting the weight on the turf.

Optionally the blade can be hydraulically angled to the right and left, ensuring that no snow is being dropped to the side already cleaned.

The Snow-Blade SB-295 is the most professional snow remover on the market, available in Norway and the rest of Scandinavia since 2008, and now also elsewhere through Spin Turf Machinery bv.

**optional extra wide tires,
185mm wide, for natural turf**
